

SECURITY CONSULTING SERVICES

“Businesses that are serious about protecting customer data (and avoiding the costs of incidents) should not stop at the minimum level mandated by the PCI. By having a more detailed annual audit enterprises would detect deficiencies (in controls and processes) more quickly and be provided with recommendations for fixes that would prevent attacks.”

On-site PCI Compliance Assessment

Even if it isn't required by the Payment Card Industry for your Organization, an onsite audit is an important step in ensuring you are maintaining effective security practices.

Rapid7's On-site PCI Compliance Assessment will provide you with an overview of the effectiveness of the security controls you have in place, including adherence to the PCI requirements that safeguard the integrity of your customer's confidential information and records. Your PCI On-Site Assessment will verify and assess the effectiveness of several required, high-level security measures such as:

- Ensuring you have a working firewall to protect data.
- Ensuring your security patches are up-to-date.
- Ensuring your stored data is adequately protected.
- Verifying all data sent across public networks is encrypted.
- Making sure anti-virus software is being used and is updated regularly.
- Restricting all access to sensitive data on a “need to know” basis.
- Verifying the user of unique user IDs for each person on the network.
- Verifying that all vendor-supplied defaults for passwords and security parameters have been changed.
- Tracking access to data by unique ID.
- Ensuring all security systems and processes are tested regularly.
- Reviewing established information security policies and ensuring they are kept current.
- Verifying the restriction of physical access to data.

Rapid7 will also provide remediation advice for those items discovered during the audit, as well as ensure you understand the initial compliance reports generated upon completion of your assessment. Rapid7 can also provide consulting services and work with you to fix problems and achieve compliance. Once all requirements are met, Rapid7 will issue a final report verifying your compliance.

About Rapid 7

Rapid7 is a leader in vulnerability management and compliance, delivering a single unified solution across an organization's entire infrastructure. Rapid7 NeXpose is the only solution that includes support for web applications, databases, operating systems, and network devices in a single system. It separates real threats from the noise common to most vulnerability management systems, giving direct, actionable visibility into the real threats to mitigate risk and remain compliant. For more information on NeXpose products and services, visit www.rapid7.com
